

The Giant Panda

By Ammar Shaikh
Abdullah

Why are these species of panda endangered?

Habitat Loss

People have been wrecking these type of panda's home just so we humans can build dams, home, and buildings.

Where is the habitat of The Giant Panda?

You can find them in Southwest China. Pandas mainly live in temperate forests in the mountains of Southwest China, but since us humans have destroyed and wrecked the homes, as well as their food source, they are extremely rare.
