Polar bears

Eats

Fish, ringed seal,
Bearded seal,
Birds, kelp, whale
carcasses, walrus.

Polar bears spend most of their
time swimming or standing on ice
floes, every on the lookout for their
favorite meal: seal. The bottom of their
paws are furry. 
This makes walking on ice a
little warmer and a lot less slippery.
Polar bears dig dens into snowdrifts
to get out of freezing weather
or take a rest.

Snow leopards

lives:

The Himalayas

tails
bodies

Snow leopards live
higher up than any
other cat. When they

sleep, snow
leopards wrap their

tails around their
bodies for warmth.

Emperer penguin

lives:
Antarctic

Eats:

Fish, krill,
Squid

In this winter place, where the air can feel unimaginably cold, Emperor penguins huddle for warmth. The middle of the huddle is snug and warm.  But the lucky penguins they don't hog the heat. Once they warmed up, they move to the outside of the group so the other colder penguins can take a turn in the middle.

Snowy owl

lives:
Arctic

Unlike most owl species the snowy owl is active in the day its legs and feet are covered in feathers to protect it from the intense cold.

Arctic hares

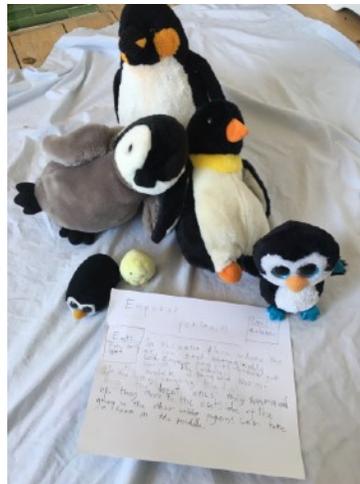

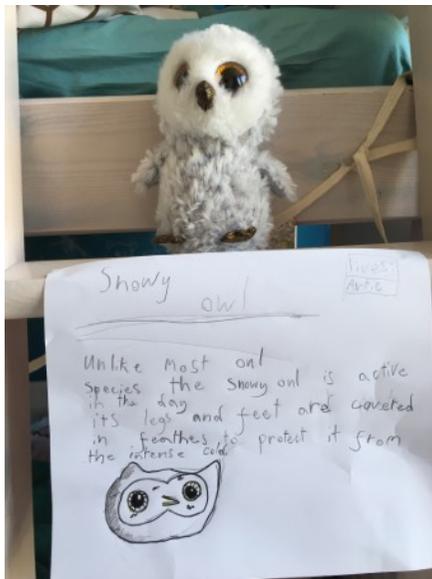

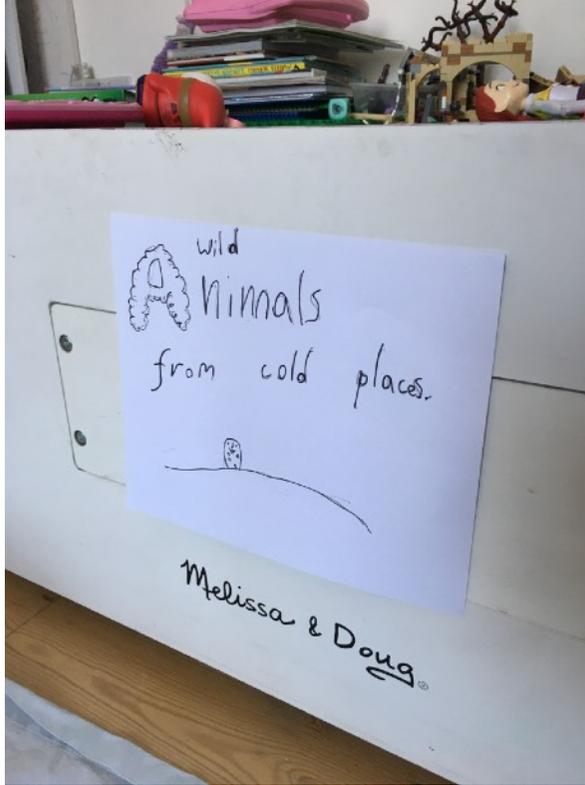

live:
Arctic

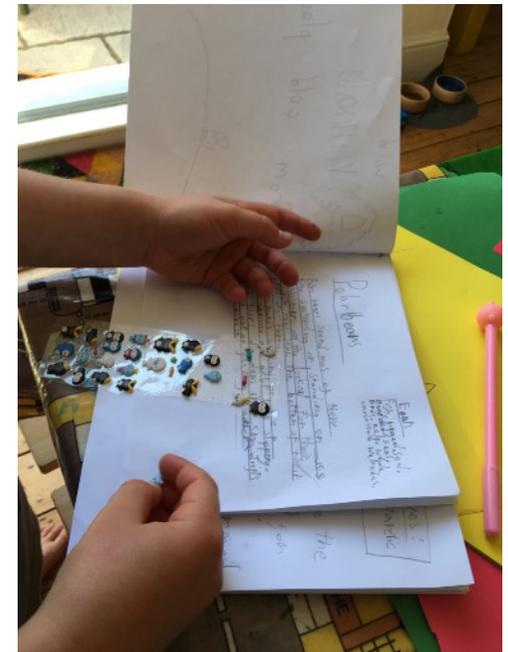

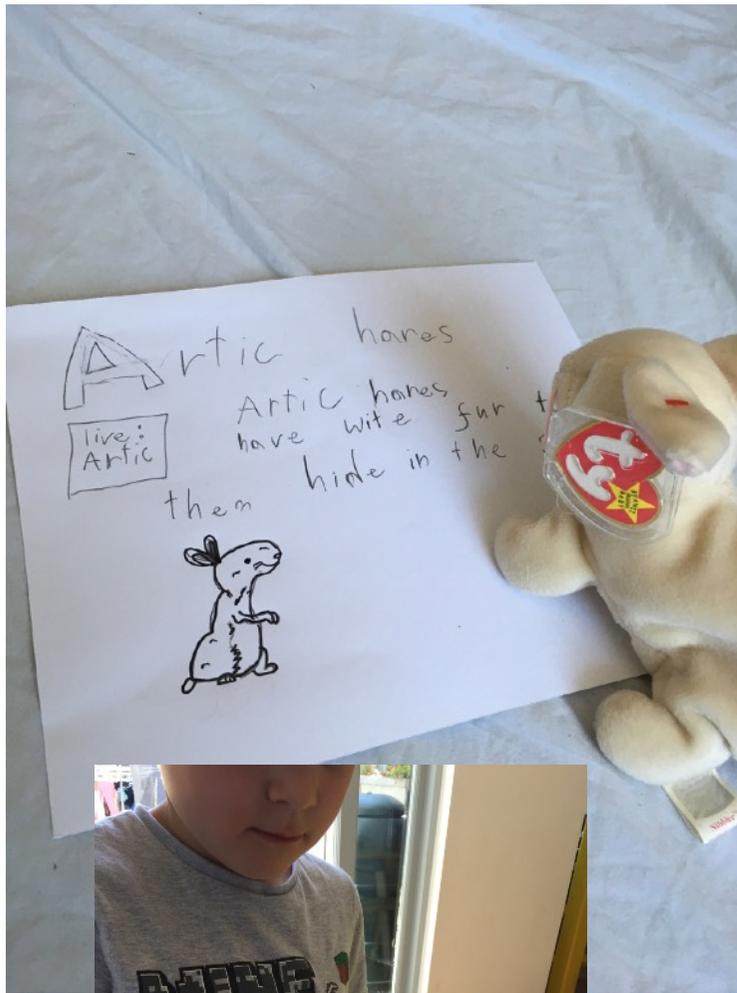

Arctic hares
have white fur to help
them hide in the snow
